

## The First Australian University Lean Thinking Program

The University of South Australia in association with the Lean Enterprise Research Centre at Cardiff University is delivering the internationally acclaimed Principles of Lean Thinking Program.

The program will be led by Professor Peter Hines one of Europe's leading Lean thinkers, educators, researchers, implementers and authors as well as local experts providing local case studies to compliment the international content.

The course is designed to provide participants with a broad understanding of Lean principles, methods and practices to assist the development of your lean implementation champions, leaders and managers for productivity and customer value improvement.

This is the first and only course of its kind in Australia. The quality of this course is acknowledged in that it is a recognized component towards the MBA qualification for those that want to pursue that path. This program is suited to people in leadership roles, taking a holistic perspective, and looking to develop integrated and sustainable improvement in their business and industry. This is a well developed and highly proclaimed program which you would have to go to Europe for until now.

As Melbourne co presenters we at Intelog are excited to see this program being made available in Australia and will be including excellent Australian case studies. The Lean Thinking course is an incredible value opportunity that will make a difference in the career and business of those that participate.

We have attached the outline of the Lean Thinking program and registration form from the University of South Australia which will be delivered in Adelaide and Melbourne.
